

STATE OF WASHINGTON
DEPARTMENT OF CORRECTIONS

PRE-SENTENCE INVESTIGATION (PS

To: The Honorable G. Helen Whitener
Pierce County Superior Court

Date Of Report: 5/23/16

NAME: DOC NUMBER:
ALIAS(ES): COUNTY: Pierce
CRIMES: Child Molestation, First Degree/DV (Counts I, II) CAUSE #:
DATE OF OFFENSE: Between 10/1/92 and 9/30/96 (Both Counts) SENTENCING DATE: 6/3/16

PRESENT ADDRESS: Pierce County Jail DEFENSE ATTORNEY:

I. OFFICIAL VERSION OF OFFENSE:

Pursuant to the Information filed on September 21st, 2011 in Pierce County Superior Court, the Pierce County Prosecuting Attorney's Ofc. formally charged

II. VICTIM/WITNESS CONCERNS (ET, TR, TT):

III. MR 'S STATEMENT REGARDING THE OFFENSES:

IV. CRIMINAL HISTORY:

SOURCES:

1. National Crime Information Center (NCIC) ar Information Center (WASCIC).
2. Washington State Department of Corrections
3. Superior Court Operations Management Info (SCOMIS).
4. Law Enforcement Support Agency (LESA).
5. District Court Information System (DISCIS).

V. SCORING:		
SERIOUSNESS LEVEL	OFFENDER SCORE	STANDARD RANGE
Counts I, II X	6	From 98 to 130 months

VI. COMMUNITY CUSTODY:		
SERIOUSNESS LEVEL	OFFENDER SCORE	STANDARD RANGE
Counts I, II X	6	36 months

VII. RISK / NEEDS ASSESSMENT:

A risk / needs assessment interview was completed with the offender. The following risk / needs area(s) and strengths have implications for potential risk, supervision, and interventions. Unless otherwise noted, the following information was provided by the offender and has not been verified.

Criminal History:

See Section IV above.

Education / Employment:

Employment is a primary socialization structure in our culture. Lack of consistent employment reflects a higher risk for, or return to criminal behavior. A history of poor job performance and attitude signifies disregard for pro-social reinforcement. Overall academic achievement is related to stability and a crime-free lifestyle.

Financial:

Financial stability and self-sufficiency are pro-social. Financial problems are considered stressors, which may be indicative of anti-social attitudes or precipitators of inappropriate ways to get money.

Family / Marital:

A satisfying family or marital situation indicates pro-social relationships and ties that are negatively correlated with criminal risk. Uncaring, negative or hostile relationships with relatives who have frequent contact indicate poor social and problem-solving skills and a lack of pro-social modeling. Parental influence is a behavioral control that inhibits anti-social behavior and is a source of pro-social modeling.

Accommodation:

A stable residence shows some ties to a neighborhood. Many changes in residence reflect insufficient neighborhood ties and could mean more exposure to or influence of pro-criminal attitudes. In a high-crime neighborhood there may be more opportunities for pro-criminal modeling and rewards for anti-social behaviors and attitudes.

Leisure and Recreation:

An excess of idle or discretionary time presents an added dimension of risk. Recent, regular involvement with a group of pro-social individuals is an indicator of attachment and bonds that would tend to constrain the individual's criminal activities.

Companions:

The presence of criminal acquaintances and/or friends is associated with an opportunity for pro-criminal modeling, which is considered a major risk factor. A lack of pro-social companions means a diminished opportunity to observe pro-social models and no reinforcement for pro-social behaviors.

Alcohol / Drug Use:

A history of substance abuse is a risk factor for criminal behavior. Substance abuse erodes significant pro-social bonds that contribute to increased criminal risk. Substance misuse may facilitate or instigate criminal behavior.

Emotional / Personal:

Mild anxiety and depression, as well as severe emotional and cognitive problems can interfere with an individual's ability to respond to occupational, social and psychological stressors. Coping deficiencies may increase the risk of criminal behavior.

Attitude / Orientation:

A criminal value orientation is strongly associated with future criminal behavior, anti-social personality disorder and psychopathic tendencies. Poor attitudes and sentiments about the conviction, sentence and/or supervision tend to indicate anti-social values. Lifestyle, predicated on sensation seeking, and general acceptance of criminal orientation, is associated with poor informal social controls.

VIII. CONCLUSIONS:

IX. SENTENCE OPTIONS:

- Confinement within the Standard Range Sentence
- Community Restitution Hours
- Exceptional Sentence
- First-time Offender Waiver (FTOW)
- Drug Offender Sentencing Alternative (DOSA)
- Special Sex Offender Sentencing Alternative (SSOSA)
- Mentally Ill Offender Sentencing Option (MIOSO)

X. RECOMMENDATIONS:

Based on information contained in the Guilty plea, I understand the Deputy Prosecutor (DPA) in this matter intends to recommend 98 months in confinement, followed upon release by 36 months' Community Custody under the supervision of the Department of Corrections; to submit to both a DNA test and an HIV test; No Contact with the victim (ET) or with any minors; to Register as a sex offender in County of residence, and thereafter to register per the Sex Offender registration statute; to obtain a Psychosexual Evaluation, and then comply with and successfully complete any and all recommended treatment: to maintain Law-Abiding behavior; forfeit any items that might be in police property; to comply with conditions outlined in Appendix H, by the CCO, and in the Pre-Sentence Investigation; and, Legal Financial Obligations as noted in Section XI.

I am in agreement with the DPA's recommendations as they were previously listed.

Sentence Type/Option: Confinement within the Standard Range Sentence

Confinement: 98 months

Length of Community Custody: 36 months

Conditions of Supervision: See attached Appendix H

XI. MONETARY OBLIGATIONS:
